## BOHS RoHS-Compliant <br> Brushless Motor Systems <br> BLF Series

The BLF Series brushless motor achieved a maximum motor speed of $4000 \mathrm{r} / \mathrm{min}$. With the digital operator, digital setting and display are possible, offering wideranging functions to meet your diverse needs.

## Features

- Wide Speed Control Range from $80 \mathrm{r} / \mathrm{min}$ up to $4000 \mathrm{r} / \mathrm{min}$ A wide speed control range from 80 to $4000 \mathrm{r} / \mathrm{min}$ (speed ratio of $50: 1$ ) enables the motor to be used for various applications.

## - Energy-Saving

At an output power of $60 \mathrm{~W}(1 / 12 \mathrm{HP})$, the power loss of the BLF Series is approximately half that of an inverter-controlled AC motor, which contributes to the energy-saving operation of your equipment.

- Multi-Speed Operation Using up to Eight Speeds

Up to eight speeds can be set by digital setting. On the digital operator, the speed can be set in units of $1 \mathrm{r} / \mathrm{min}$ and a different acceleration/deceleration time can be set for each speed. Switch the speed according to your needs.

## Moorc: $\mathbf{N H}_{\text {us }}$ C

- List of safety standard approved products (Model, Standards, File No., Certification Body) $\rightarrow$ Page G-11

## Easy Operation with the Digital Operator

You can perform various settings and operations using the six operation keys on the digital operator.

- Various Digital Displays

Speed, load factor, alarm code, etc. can be displayed digitally. - The speed can be displayed as gearhead output shaft speed.

## -Four Speed Setting Methods

Select one of four speed setting methods according to the condition in which your equipment is used.

## - Speed Teaching Function

The speed adjusted by physically operating the motor can be set and stored.

## - Sink/Source Logic Switchable

To ensure safety and usability, sink/source logic can be selected by a switch.

- The factory setting is the sink logic.

## - Full Range of Protective Functions

The BLF Series detects various motor and driver errors such as overload, overvoltage, undervoltage, missing phase, overspeed, overcurrent, EEPROM error, CPU error, operation error and external error. Upon detection of an error, the driver will immediately stop the motor and output an alarm signal.

## - Detachable Digital Operator

The digital operator can be detached from the driver and used at a location as far as 5 m (16.4 ft.) away using an accessory remotecontrol kit (sold separately). Use the digital operator as a handy operation unit or display outside the switch board. (The digital operator conforms to IP65 when the remote-control kit is used.)

## - A Maximum Motor/Driver Wiring Distance of 20 m ( 65.6 ft .)

By separating the motor cable and signal cable, the BLF Series is less vulnerable to noise and capable of an extension of the motor/ driver wiring distance to a maximum of $20 \mathrm{~m}(65.6 \mathrm{ft}$.).
Select connection cables (sold separately) from among the eight lengths of 1 to 20 m ( 3.3 to 65.6 ft .).
Note:

- Be sure to purchase connection cables (sold separately).

Motor Side

Signal Connection Cable

## - Uses a Terminal Block for Driver Connection

The driver-end of each cable has terminals, instead of a connector, to make it easy to wire the cable into a switch board.

## - Long Life Gearhead Rating of 10000 Hours

The rated life of the parallel shaft gearhead and hollow shaft flat gearhead is 10000 hours (at $3000 \mathrm{r} / \mathrm{min}$ ). The parallel shaft gearhead achieves a rated life of twice as long as that of a conventional gearhead.

- The 60 W ( $1 / 12 \mathrm{HP}$ ), 120 W ( $1 / 6 \mathrm{HP}$ ), 200 W ( $1 / 4 \mathrm{HP}$ ) and 400 W ( $1 / 2 \mathrm{HP}$ ) parallel shaft gearhead has a tapped hole at the shaft end.

## - Features of Hollow Shaft Flat Gearhead

$\checkmark$ Space-Saving and Low-Cost
The output shaft can be coupled directly to a driven shaft without using a coupling, which allows you to reduce the size and installation space of your equipment. Since no shaft-coupling parts are needed, the parts cost and labor will also decrease.

## $\diamond$ High Permissible Torque

While the permissible torque of parallel shaft gearhead saturates at high gear ratios, the hollow shaft flat gearhead enables the motor torque to be fully utilized.

## - IP65 Protection

The motor (excluding the mounting surface of the round shaft type and the connector) and digital operator (when an accessory remotecontrol kit is used) provide a high level of protection conforming to IP65. It means you can use the BLF Series in locations where the unit may come into contact with water.

- The BLF Series is not designed for washing directly in water or use in an environment where the unit constantly receives water splashes. The protection class of the driver is IP20.

## -ROHS RoHS-Compliant

The BLF Series conforms to the RoHS Directive that prohibits the use of six chemical substances including lead and cadmium. - Details of RoHS Directive $\rightarrow$ Page G-38

## System Configuration

- Combination Type - Parallel Shaft Gearhead/Round Shaft Type

| No. | Product Name |  | Overview |
| :---: | :--- | :--- | :---: |
| (1) | Connection Cables | Dedicated cable for connecting the motor and driver [1 to $20 \mathrm{~m}(3.3$ to 65.6 ft$)]$. Be sure to purchase this cable. | Pat |
| $(2)$ | Remote-Control Kit | Use this kit when removing the digital operator from the driver to operate it remotely. | B-85 |
| (3) | Mounting Brackets | Dedicated mounting bracket for the motor and gearhead. | A-288 |
| (4) | Flexible Couplings | Clamp type coupling that connects the motor or gearhead shaft to the driven shaft. | A-292 |
| (5) | External Speed Potentiometer | Used to set and adjust the speed of the speed control motor (PAVR-20KZ). | A-300 |

| System C | (Sold separately) | 十 | (Sold separately) |  |  |  |

## - Connection Cables (Sold separately)

## $\diamond$ Cable Set

The cable set consists of two cables including a motor connection cable and a signal connection cable.

| Length | Model |
| :---: | :---: |
| 1 m (3.3 ft.) | CCO1BLF |
| 2 m (6.6 ft.) | CCO2BLF |
| 3 m (9.8 ft.) | CCO3BLF |
| 5 m (16.4 ft.) | CC05BLF |
| 7 m (23.0 ft.) | CC07BLF |
| 10 m (32.8 ft.) | CC10BLF |
| 15 m (49.2 ft.) | CC15BLF |
| 20 m (65.6 ft.) | CC20BLF |

- The BLF Series requires two dedicated cables, one for the motor and the other for signals, for connection between the motor and driver. Be sure to purchase the connection cable set.
-Pinion Shaft Type

- The values for each specification apply to the motor only.

## Common Specifications

| Item | Specifications |
| :---: | :---: |
| Speed Setting Methods | Select one of the following methods: <br> - Set using the internal speed potentiometer <br> - Set using the digital operator: Up to eight speeds <br> - Set using an accessory external speed potentiometer: PAVR-20KZ (20 k $\Omega, 1 / 4 \mathrm{~W}$ ) (sold separately) <br> - Set using external DC voltage: $0 \sim 5$ VDC or $0 \sim 10$ VDC |
| Acceleration/Deceleration Time (At $3000 \mathrm{r} / \mathrm{min}$ ) | $0.2 \sim 15 \mathrm{sec}$. (factory setting: 0.5 sec .) Up to eight speeds using the digital operator |
| Input Signals (In the remote mode) | Photocoupler input Input resistance $3.3 \mathrm{k} \Omega$ <br> Internal power supply voltage: $14 \mathrm{VDC} \pm 10 \%$ <br> Connectable external voltage: $24 \mathrm{VDC} \pm 10 \%$ (only for source logic) <br> Sink input (factory setting), Source input/2-wire input mode (factory setting), or 3-wire input mode <br> CW [START/STOP] input, CCW [RUN/BRAKE] input, STOP-MODE [CW/CCW] input, Speed data select, Alarm reset input, External error input Names in [ ] apply in the 3-wire input mode. |
| Output Signals | Open-collector output 4.5~26.4 VDC, 10 mA max. ( $5 \sim 10 \mathrm{~mA}$ for Speed output) Speed output (30 pulses/rotation), Alarm output1, Alarm output2 |
| Protective Functions* | When the following are activated, the "Alarm" signal will be output and the motor will coast to a stop. (The motor will stop instantaneously when an external error is input.) <br> - Overload protection: Activated when the motor load exceeds rated torque for a minimum of 5 seconds. <br> - Overvoltage protection: Activated when the voltage applied to the driver exceeds 120 VAC or 240 VAC by a minimum of $20 \%$, a gravitational operation is performed or a load exceeding the permissible load inertia is driven. <br> - Undervoltage protection: Activated when the voltage applied to the driver falls below 100 VAC or 200 VAC by a minimum of $40 \%$. <br> - Motor sensor error: Activated when an error is detected in the signals received from the motor due to improper connection or disconnection of the signal cable, etc. <br> - Overspeed protection: Activated when the speed of the motor shaft exceeds $4800 \mathrm{r} / \mathrm{min}$. <br> - Overcurrent protection: Activated when an excessive current flows through the driver due to a ground fault, etc. <br> - CPU error, EEPROM error, External error, Operation error |
| Maximum Cable Extension Distance | Motor/Driver Distance: 20.4 m ( 66.9 ft .) (when a dedicated connection cable is used) |
| Time Rating | Continuous |
| *With the BLF Series, the motor speed cannot be controlled in a gravitational operation or other application where the motor shaft is turned by the load. |  |

General Specifications

| Item | Motor | Driver |
| :---: | :---: | :---: |
| Insulation Resistance | $100 \mathrm{M} \Omega$ or more when 500 VDC megger is applied between the windings and the case after continuous operation under normal ambient temperature and humidity. | $100 \mathrm{M} \Omega$ or more when 500 VDC megger is applied between the power supply terminal and the protective earth terminal, and between the power supply terminal and the I/O terminal after continuous operation under normal ambient temperature and humidity. |
| Dielectric Strength | Sufficient to withstand 1.5 kVAC at 50 Hz applied between the windings and the case for 1 minute after continuous operation under normal ambient temperature and humidity. | Sufficient to withstand 1.8 kVAC at 50 Hz applied between the power supply terminal and the protective earth terminal for 1 minute, and 3 kVAC at 50 Hz applied between the power supply terminal and the I/O terminal for 1 minute after continuous operation under normal ambient temperature and humidity. |
| Temperature Rise | Temperature rise of the windings and the case are $50^{\circ} \mathrm{C}\left(90^{\circ} \mathrm{F}\right)$ or less, and $40^{\circ} \mathrm{C}\left(72^{\circ} \mathrm{F}\right)$ or less*1 respectively measured by the thermocouple method after continuous operation under normal ambient temperature and humidity. | Temperature rise of heat sink is $50^{\circ} \mathrm{C}\left(90^{\circ} \mathrm{F}\right)$ or less measured by the thermocouple method after continuous operation under normal ambient temperature and humidity. |
| Ambient Temperature | $0 \sim+50^{\circ} \mathrm{C}\left(+32 \sim+122^{\circ} \mathrm{F}\right)$ (non-freezing) |  |
| Operating <br> Environment | 85\% or less (non-condensing) |  |
|  | Up to 1000 m (3300 ft.) above sea level |  |
|  | No corrosive gases or dust. Cannot be used in a radioactive area, magnetic field, vacuum or other special environment |  |
| Vibration | Not subject to continuous vibration or excessive impact In conformance with JIS C 60068-2-6, "Sine-wave vibration test method" Frequency range: $10 \sim 55 \mathrm{~Hz}$ Pulsating amplitude: 0.15 mm ( 0.006 in .) Sweep direction: 3 directions ( $\mathrm{X}, \mathrm{Y}, \mathrm{Z}$ ) Number of sweeps: 20 times |  |
| StorageCondition*2 $\quad$Ambient Temperature | $-25 \sim+70^{\circ} \mathrm{C}\left(-13 \sim+158^{\circ} \mathrm{F}\right)$ (non-freezing) |  |
|  | 85\% or less (non-condensing) |  |
|  | Up to 3000 m (10000 ft.) above sea level |  |
| Insulation Class | UL, CSA: Class A [105 $\left.{ }^{\circ} \mathrm{C}\left(221^{\circ} \mathrm{F}\right)\right] \quad \mathrm{EN}$ : Class E [ $\left.120^{\circ} \mathrm{C}\left(248^{\circ} \mathrm{F}\right)\right]$ | - - |
| Degree of Protection | IP65 (Excluding the mounting surface of the round shaft type and connectors) | IP20 |

* 1 For round shaft types, please attach to the heat radiation plate (material: aluminum) of the following sizes to maintain a maximum motor case temperature of $90^{\circ} \mathrm{C}\left(194^{\circ} \mathrm{F}\right)$.

BLF230 $\square$-A: $115 \times 115 \mathrm{~mm}(4.53 \times 4.53 \mathrm{in}$.), $5 \mathrm{~mm}(0.20 \mathrm{in}$.) thick $\quad$ BLF460 $\square$-A: $135 \times 135 \mathrm{~mm}(5.31 \times 5.31 \mathrm{in}$.), $5 \mathrm{~mm}(0.20 \mathrm{in}$.) thick
BLF5 $120 \square$-A: $165 \times 165 \mathrm{~mm}(6.50 \times 6.50 \mathrm{in}$.), $5 \mathrm{~mm}(0.20 \mathrm{in}$.) thick $\quad$ BLF6200 $\square$-A: $200 \times 200 \mathrm{~mm}(7.87 \times 7.87 \mathrm{in}$.), $5 \mathrm{~mm}(0.20 \mathrm{in}$.) thick
BLF6400S-A: $250 \times 250 \mathrm{~mm}(9.84 \times 9.84 \mathrm{in}$.), $6 \mathrm{~mm}(0.24$ in.) thick

- Enter the power supply voltage ( $\mathbf{A}, \mathbf{C}$ or $\mathbf{S}$ ) in the box ( $\square$ ) within the model name.
*2 The storage condition applies to a short period such as a period during transportation.
Note:
- Do not measure insulation resistance or perform the dielectric strength test while the motor and driver are connected.

| X1 |  | 3-Wire Mode: START/STOP Input | Start/stop input signal |
|  |  | 2-Wire Mode: CCW Input | Counterclockwise rotation/stop switch input signal |
| X2 |  | 3-Wire Mode: RUN/BRAKE Input | Run/instantaneous stop input signal |
|  |  | 2-Wire Mode: STOP-MODE Input | This signal is input to select the motor stop action. |
| X3*2 |  | 3-Wire Mode: CW/CCW Input | Clockwise/counterclockwise direction input signal |
| X4 |  | N. C. | Do not connect any signals to this terminal. |
| X5 |  | ALARM-RESET Input | This signal is used to reset alarms. |
| Y1 | Output | ALARM-OUT1 Output | This signal is output upon generation of an alarm. (Normally closed) |
| Y2 |  | ALARM-OUT2 Output | This signal is output upon actuation of the overload protective function or overload warning function. (Normally closed) |
| Y0 |  | SPEED-OUT Output | 30 pulses are output per each rotation of the motor output shaft. |
| C2 |  | OUT-COM | Output signal common |

*1 Do not remove the short circuit bar if the EXT-ERROR input is not used.
*2 The functions of the external-input signal terminals X1, X2 and X3 can be changed between the 2 -wire input mode and 3 -wire input mode. The functions under the 2 -wire input mode are initially assigned to the terminals.

- Digital Operator Indicator

| Display |  | Function | Description |
| :---: | :---: | :---: | :---: |
| RUN |  | Running | A green LED stays lit while the motor is running. |
| ALARM |  | Alarm | A red LED turns on when an alarm occurs. |
| Mode | MNTR | Monitor mode | The motor can be operated in this mode. The motor speed and load condition are displayed during motor operation. |
|  | F/R | Direction setting mode | If the digital operator is used to operate the motor, set the motor direction in this mode. For: Clockwise direction, rEv: Counterclockwise direction |
|  | LO/RE | Digital operator/external-input signal mode | In this mode, set whether to use the digital operator or external I/0 signals to input the motor operation/stop signals. Lo: Digital operator, rE: External-input signals |
|  | PRGM | Data setting mode | In this mode, set the data needed to operate the motor. Operation data (eight speeds and acceleration/deceleration times), Gear ratio setting/conveyor speed setting Input mode, Overload warning function |
| Display Unit | r/min | Motor speed | The speed of the motor or gearhead output shaft is displayed. |
|  | m/min | Conveyor speed | An equivalent moving speed of the work on a conveyor or other transfer system is displayed. |
|  | \% | Load factor* | The actual load is displayed as a percentage of the rated torque being $100 \%$. |

*A maximum error of approximately $20 \%$ may generate when the motor is operated at the rated speed under the rated load.

## - Connection Diagram

The figure below is a connection diagram for a configuration based on a single-phase 100-120 V supply voltage, with the sink/source selector switch set to the sink side.

*1 The grounding method will vary depending on the length of the connection cable.
When the connection cable is $7 \mathrm{~m}(23.0 \mathrm{ft}$.) or shorter: Connect the protective earth terminal on the connection cable to the protective earth terminal on the driver.
When the connection cable is $10 \mathrm{~m}(32.8 \mathrm{ft}$.) or longer: Connect the protective earth terminal of the motor directly to the grounding point.
*2 The main circuit is insulated to prevent electrical shock resulting from accidental contact by a hand, etc.
*3 The signal cable connection terminals and the signal cable including the shielded cable comprise an ELV circuit, which is insulated from dangerous voltages only by means of basic insulation.
Therefore, connect the shielded cable to the GND point specified in the connection diagram, instead of connecting it to a protective earth terminal.

* 4 The I/O signal connection terminals comprise a SELV circuit, which is insulated from dangerous voltages by means of double insulation or reinforced insulation.

## $\diamond$ Applicable Crimp Terminals

## - Power Supply Connection Terminals (M3.5):

Round Terminal with Insulation

- Protective Earth Terminals (M4): Round Terminal with Insulation

## - I/O Terminals

Use the terminals specified below for connection using crimp terminals. Please note that the applicable crimp terminal will vary depending on the size of the wire. The following terminals can be used with wires of AWG26 to 22.
[Manufacturer: Phoenix Contact] AI 0.25-6 Applicable wire size AWG26 to 24 ( 0.14 to $0.2 \mathrm{~mm}^{2}$ )
AI 0.34-6 Applicable wire size : AWG22 ( $0.3 \mathrm{~mm}^{2}$ )

## - Timing Chart

## $\diamond$ 2-Wire Mode

## $\diamond 3$-Wire Mode

- The CW input signal, CCW input signal and STOP-MODE signal can be used to control all motor operations, such as run, stop, direction switching, deceleration stop and instantaneous stop. - Switching the CW signal ON will cause the motor to turn clockwise as viewed from the motor shaft, while switching the CCW signal ON will cause the motor to turn counterclockwise. Switching each signal OFF will stop the motor. If both the CW signal and CCW signal are turned ON at the same time, the motor will stop instantaneously. The motor will start at the rise time corresponding to the acceleration time (ACC) set on the digital operator.
- Switching the STOP-MODE signal ON will cause the motor to decelerate at the deceleration time (DEC) set on the digital operator until it eventually stops. Switching the STOP-MODE signal OFF will cause the motor to stop instantaneously.
- The START/STOP signal, RUN/BRAKE signal and CW/CCW signal can be used to control all motor operations, such as run/stop, instantaneous stop and direction switching.
- Switching both the START/STOP signal and RUN/BRAKE signal ON at the same time will start the motor. At this time, switching the CW/CCW signal ON will cause the motor to turn clockwise as viewed from the motor shaft, while switching the signal OFF will cause the motor to turn counterclockwise. The motor will start at the rise time corresponding to the acceleration time (ACC) set on the digital operator.
- Switching the RUN/BRAKE signal OFF while the START/STOP signal is ON will cause the motor to stop instantaneously. Switching the START/STOP signal OFF while the RUN/BRAKE signal is ON will cause the motor to decelerate at the deceleration time (DEC) set on the digital operator until it eventually stops.

## - Input/Output Signal Circuits

The initial setting is the sink logic. Select the sink logic or source logic according to the controller you will be using.

## $\diamond$ Input Circuit

Common to the CW (START/STOP), CCW (RUN/BRAKE), STOPMODE (CW/CCW), EXT-ERROR, ALARM-RESET and operation-data selection inputs.

## - Sink Logic

- Source Logic

$\diamond$ Output Circuit
Common to the SPEED-OUT, ALARM-OUT1 and ALARM-OUT2 outputs.

Y1: ALARM-OUT1 output
Y2: ALARM-OUT2 output

* Supply a current of 5 mA or more to the SPEED-OUT output.
- Source Logic

* Supply a current of 5 mA or more to the SPEED-OUT output.
$\diamond$ When an External Control Device with a Built-In Clamp Diode is Used
When you want to use an external control device with a built-in clamp diode, if the external control device power is turned off with the driver power turned on, current will be applied and the motor may run. When the power is turned on or off simultaneously, the motor may run temporarily due to differences in power capacity. The external control device power must be turned on first, and driver power must be turned off first.
- Example of Sink Logic

## $\diamond$ SPEED-OUT Output

Pulse signals of 30 pulses (pulse width: 0.2 ms ) are output per each rotation of the motor output shaft in synchronization with the motor operation.
By measuring the frequency of SPEED-OUT outputs, the motor speed can be calculated.

$$
\begin{aligned}
& \text { SPEED-OUT output frequency }(\mathrm{Hz})=\frac{1}{\mathrm{~T}} \\
& \text { Motor shaft speed }(\mathrm{r} / \mathrm{min})=\frac{\text { SPEED-OUT output frequency }}{30} \times 60
\end{aligned}
$$

## $\diamond$ ALARM-OUT1 Output

When any of the driver's protective functions is activated, the ALARM-OUT1 output will turn OFF and the digital operator will display an alarm code. The motor will coast to a stop.

## $\diamond$ ALARM-OUT2 Output

The ALARM-OUT2 output will turn OFF when the driver's overload protective function or overload warning function is activated.
Actuation of any other protective function will not turn this output OFF.
The overload warning function is activated based on a preset load factor relative to the rated torque. The ALARM-OUT2 output will turn OFF once the set load factor is exceeded.
(A desired load factor can be set at $10 \%$ intervals between 50 and $100 \%$.)

| Type of Protective Function | ALARM-OUT1 Output | ALARM-OUT2 Output |
| :--- | :---: | :---: |
| Normal Operation | ON | ON |
| Overload Protective Function | OFF | OFF |
| Other Protective Functions | OFF | ON |
| Overload Warning Function* | ON | OFF |
| *A maximum error of approximately 20\% may generate when the motor is operated at the |  |  |
| rated speed under the rated load. |  |  |

## -Operating Methods

One of the following two operating methods ( a and b ) can be set by switching between the digital operator mode and external input signal mode.
a) Operate the motor using the RUN and STOP keys on the digital operator
b) Operate the motor using external input signals

## - Speed Setting Methods

One of the following four methods (1) to (4)) can be used to set speeds:
(1) Set speeds using the internal speed potentiometer Set speeds using the potentiometer provided on the driver's front panel.
(2) Set speeds using the digital operator

The digital operator can be used to set speeds in units of $1 \mathrm{r} / \mathrm{min}$. Up to eight speed data can be set.
(3) Set speeds using an external speed potentiometer (sold separately)
To set speeds at a location away from the driver, connect an accessory external speed potentiometer as shown below.

External Speed Potentiometer

External Speed Potentiometer Scale - Speed Characteristics (Representative values)
Note:

- The speed in the graph represents the speed of a motor alone. The gearhead output shaft speed of the combination type is calculated by dividing the graph speed by the gear ratio.
(4) Set speeds using external DC voltage

Set the external voltage select switch on the driver in accordance with the external DC voltage to be supplied. Detach the digital operator and set the switch to either 5 V or 10 V .
Thereafter, connect an external DC power supply as shown below. Connect the positive and negative terminals of the power supply correctly.

Note:

- The speed in the graph represents the speed of a motor alone. The gearhead output shaft speed of the combination type is calculated by dividing the graph speed by the gear ratio.

## - Multi-Speed Operation

## $\diamond$ Two-Speed Operation

The speed set by the internal speed potentiometer and another set by an external speed potentiometer can be combined for two-speed operation by switching the operation data selection input MO.

| M0 Input | M1 Input | M2 Input | Speed Setting Method |
| :---: | :---: | :---: | :---: |
| OFF | OFF | OFF | Internal speed potentiometer |
| ON | OFF | OFF | External speed potentiometer |

## $\diamond$ Eight-Speed Operation

A multi-speed operation using up to eight speeds can be performed by setting desired speeds in operation data No. 1 to 8 and then
switching the speed using operation-data selection input M0, M1 or M2.

| Operation Data | M0 Input | M1 Input | M2 Input | Speed Setting Method |
| :---: | :---: | :---: | :---: | :---: |
| No. 1 | OFF | OFF | OFF | Internal speed potentiometer/Digital operator |
| No.2 | ON | OFF | OFF | External speed potentiometer/Digital operator |
| No.3 | OFF | ON | OFF | Digital operator |
| No.4 | ON | ON | OFF | Digital operator |
| No.5 | OFF | OFF | ON | Digital operator |
| No.6 | ON | OFF | ON | Digital operator |
| No.7 | OFF | ON | ON | Digital operator |
| No.8 | ON | ON | ON | Digital operator |

## - Multi-Motor Control

Two or more motors can be operated at the same speed by using a single external speed potentiometer or external DC voltage. The diagram below applies to a single-phase power supply specification. For a three-phase power supply specification, change the power supply line to a three-phase type. Also note that the diagram does not show the motor or operation control part.

## $\diamond$ Using an External Speed Potentiometer

As shown in the diagram, use a common power supply line and a common speed control line for each driver and set speeds by using the external speed potentiometer VRx.
The resistance of the external speed potentiometer is determined using the formula below:

Resistance when the number of drivers is $n$ :
VRx = 20/n (k $\Omega$ ), n/4 (W)
Example: When two drivers are connected

$$
V R x=20 / 2=10(k \Omega), 2 / 4=1 / 2(W)
$$

Accordingly, the resistance is calculated as $10 \mathrm{k} \Omega, 1 / 2 \mathrm{~W}$.
To adjust the speed difference between motors, connect a $1.5 \mathrm{k} \Omega$, $1 / 4 \mathrm{~W}$ resistor to the VM terminal on the first driver, and connect a $5 \mathrm{k} \Omega, 1 / 4 \mathrm{~W}$ variable resistor (VRn) to the VM terminal on each of the remaining drivers.
Up to five drivers can be operated in parallel using an external speed potentiometer.

## $\diamond$ Using External DC Voltage

As shown in the diagram, use a common power supply line and a common speed control line for each driver and connect all drivers to a 5 or 10 VDC power supply.
The power-supply capacity of the external DC power supply is determined using the formula below:

Power-supply capacity when the number of drivers is $n$ :
I = $1 \times \mathrm{n}(\mathrm{mA})$
Example: When two drivers are connected

$$
I=1 \times 2=2(m A)
$$

Accordingly, the power-supply capacity is calculated as 2 mA or more.

To adjust the speed difference between motors, connect a $1.5 \mathrm{k} \Omega$, $1 / 4 \mathrm{~W}$ resistor to the VM terminal on the first driver, and connect a $5 \mathrm{k} \Omega, 1 / 4 \mathrm{~W}$ variable resistor (VRn) to the VM terminal on each of the remaining drivers.

## $\diamond$ Using the Digital Operator

When multiple drivers are connected where the same data are set digitally in each driver, the operations of multiple motors can be controlled via an external input signal using the wiring circuit shown below.

## Rotation Direction of the Hollow Shaft Flat Gearhead

The hollow shaft flat gearhead of the combination type rotates in the direction as shown below, with respect to the direction input from the driver.

## List of Motor and Driver Combinations

- Combination Type - Parallel Shaft Gearhead

The combination type comes with the motor and parallel shaft gearhead pre-assembled.

| Output Power | Model | Motor Model | Gearhead Model | Driver Model |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} 30 \mathrm{~W} \\ (1 / 25 \mathrm{HP}) \end{gathered}$ | BLF230A- $\square$ | BLFM230-GFS | GFS2G $\square$ | BLFD30A2 |

## - Product Line

The cable set consists of two cables including a motor connection cable and a signal connection cable.

| Model | Length: $\mathrm{L}[\mathrm{m}(\mathrm{ft})]$. |
| :---: | :---: |
| CC01BLF | $1(3.3)$ |
| CCO2BLF | $2(6.6)$ |
| CC03BLF | $3(9.8)$ |
| CC05BLF | $5(16.4)$ |
| CC07BLF | $7(23.0)$ |
| CC10BLF | $10(32.8)$ |
| CC15BLF | $15(49.2)$ |
| CC20BLF | $20(65.6)$ |

## $\diamond$ Signal Connection Cable

## - Remote-Control Kit RoHS

The remote-control kit is useful if you want to detach the digital operator from the driver and install it on the frame of the equipment, etc., for remote operation.
The kit includes an extension cable for digital operator/driver connection [2 or 5 m ( 6.6 or 16.4 ft .)] and a rubber gasket.

| Model | Length: $\mathrm{m}(\mathrm{ft})$. |
| :---: | :---: |
| BLFHS-02 | $2(6.6)$ |
| BLFHS-05 | $5(16.4)$ |

[^0]:    - The system configuration shown above is an example. Other combinations are available.

[^1]:    - Enter the gear ratio in the box ( $\square$ ) within the model name.
